

# **GEOLOGY SYLLABUS**

## **PAPER - 1 SECTION A**

### **1. General Geology**

1. The Solar System
2. Meteorites
3. Geomorphic Processes
4. origin and interior of the earth
5. Radioactivity and age of earth
6. Volcanoes causes and products, volcanic belts
7. Earthquakes-causes, effects, earthquake belts, seismicity of India, intensity and magnitude, seismographs.
8. Island arcs, deep sea trenches and mid-ocean ridges
9. Continental drift evidences and mechanics
10. seafloor spreading,
11. plate tectonics (Continents and oceans)

### **2. Geomorphology and Remote Sensing**

#### **2.1 Geomorphology**

1. Basic concepts of geomorphology
2. Weathering and mass wasting
3. Landforms
4. slopes and drainage
5. Geomorphic cycles and their interpretation
6. Morphology and its relation to structures and lithology

7. Applications of geomorphology in mineral prospecting, civil engineering, hydrology and environmental studies.
8. Geomorphology of Indian subcontinent.

## **2.2 Remote Sensing**

1. Aerial photographs and their interpretation-merits and limitations.
2. The Electron-magnetic Spectrum.
3. Orbiting satellites and sensor systems.
4. Indian Remote Sensing Satellites.
5. Satellites data products.
6. Applications of remote sensing in geology.
7. The Geographic Information System and its applications.
8. Global Positioning System.

## **3. Structural geology**

1. Principles of geologic mapping and map reading
2. projection diagrams
3. stress and strain ellipsoid
4. stress strain relationships of elastic, plastic and viscous materials
5. Strain markers in deformed rocks
6. Behaviour of minerals and rocks under deformation conditions
7. Folds and faults classification and mechanics
8. Structural analysis of folds, foliations, lineation, joints and faults, unconformities
9. Superposed deformation.
10. Time relationship between crystallization and deformation.
11. Introduction to Petro-fabrics.

# PAPER - 1 SECTION B

## 4. Palaeontology

1. Species- definition and nomenclature.
2. Mega fossils and Microfossils.
3. Modes of preservation of fossils.
4. Different kinds of microfossils.
5. Application of microfossils in correlation, petroleum exploration, paleoclimatic and paleo oceanographic studies.
6. Morphology, geological history and evolutionary trend in Cephalopoda, Trilobita, Brachiopoda, Echinoidea and Anthozoa.
7. Stratigraphic utility of Ammonoidea, Trilobita and Graptoloidea.
8. Evolutionary trend in Hominidae, Equidae and Proboscidea.
9. Siwalik fauna.
10. Gondwana flora and its importance

## 5. Stratigraphy and Geology of India

1. Classification of stratigraphic sequences: litho-stratigraphic, bio stratigraphic, chronostratigraphic and magneto-stratigraphic and their interrelationships.
2. Distribution and classification of Precambrian rocks of India.
3. Study of stratigraphic distribution and lithology of Phanerozoic rocks of India with reference to fauna, flora and economic importance.
4. Major boundary problems- Cambrian/Precambrian, Permian/Triassic, Cretaceous/Tertiary and Pliocene/Pleistocene.
5. Study of climatic conditions, paleogeography and igneous activity in the Indian subcontinent in the geological past.
6. Tectonic framework of India.
7. Evolution of the Himalayas.

## **6. Hydrogeology and Engineering Geology**

### **6.1 Hydrogeology**

1. Hydrologic cycle and genetic classification of water.
2. Movement of subsurface water.
3. Springs.
4. Porosity, permeability, hydraulic conductivity, transmissivity and storage coefficient
5. classification of aquifers
6. Water-bearing characteristics of rocks
7. Groundwater chemistry
8. Salt water intrusion
9. Types of wells
10. Drainage basin morphometry
11. Exploration for groundwater
12. Groundwater recharge
13. Problems and management of groundwater
14. Rainwater harvesting

### **6.2 Engineering Geology**

1. Engineering properties of rocks
2. Geological investigations for dams, tunnels and bridges
3. Rock as construction material
4. Alkali-aggregate reaction
5. Landslides-causes, prevention and rehabilitation
6. Earthquake-resistant structures

# PAPER II SECTION A

## 7. Mineralogy

### 7.1 Crystallography

1. Classification of crystals into systems and classes of symmetry.
2. International system of crystallographic notation.
3. Use of projection diagrams to represent crystal symmetry.
4. Crystal defects.
5. Elements of X-ray crystallography.

### 7.2 Optical Mineralogy

1. Petrological microscope and accessories.
2. Optical properties of common rock forming minerals.
3. Pleochroism, extinction angle, double refraction, birefringence,
4. Twinning

### 7.3 Minerology

1. Physical and chemical characters of rock forming silicate mineral groups.
2. Structural classification of silicates.
3. Common minerals of igneous and metamorphic rocks.
4. Minerals of the carbonate, phosphate, sulphide and halide groups

## 8. Igneous and Metamorphic Petrology

### 8.1 Igneous Petrology

1. Generation and crystallisation of magma.
2. Crystallisation of albite-anorthite, diopside-anorthite and diopside
3. wollastonite-silica systems.

4. Reaction principle.
5. Magmatic differentiation and assimilation.
6. Petrogenetic significance of the textures and structures of igneous rocks.
7. Petrography and petrogenesis of granite, syenite, diorite, basic and ultrabasic groups, charnockite, anorthosite and alkaline rocks, Carbonatites.
8. Deccan volcanic province.

## 8.2 Metamorphic Petrology

1. Types and agents of metamorphism.
2. Metamorphic grades and zones.
3. Phase rule.
4. Facies of regional and contact metamorphism.
5. ACF and AKF diagrams.
6. Textures and structures of metamorphic rocks.
7. Metamorphism of arenaceous, argillaceous and basic rocks.
8. Minerals assemblages
9. Retrograde metamorphism.
10. Metasomatism and granitisation, migmatites
11. Granulite terrains of India.

## 9. Sedimentology

1. Sedimentary rocks: Processes of formation, diagenesis and lithification.
2. Properties of sediments.
3. Clastic and non-clastic rocks-their classification, petrography and depositional environment.
4. Sedimentary facies and provenance.
5. Sedimentary structures and their significance.
6. Heavy minerals and their significance.
7. Sedimentary basins of India

## **PAPER II SECTION B**

### **10. Economic Geology**

1. Ore, ore minerals and gangue, tenor of ore
2. Classification of ore deposits
3. Process of formation of minerals deposits
4. Controls of ore localisation
5. Ore textures and structures
6. Metallogenic epochs and provinces
7. Geology of the important Indian deposits of aluminium, chromium, copper, gold, iron, lead zinc, manganese, titanium, uranium and thorium and industrial minerals.
8. Deposits of coal and petroleum in India.
9. National Mineral Policy
10. Conservation and utilization of mineral resources
11. Marine mineral resources and Law of Sea

### **11. Mining Geology**

1. Methods of prospecting-geological, geophysical, geochemical and geobotanical. Techniques of sampling.
2. Estimation of reserves or ore.
3. Methods of exploration and mining metallic ores, industrial minerals and marine mineral resources.
4. Mineral beneficiation and ore dressing

# 12. Geochemistry and Environmental Geology

## 12.1 Geochemistry

1. Cosmic abundance of elements
2. Composition of the planets and meteorites.
3. Structure and composition of earth and distribution of elements.
4. Trace elements.
5. Elements of crystal chemistry-types of chemical bonds, coordination number.
6. Isomorphism and polymorphism.
7. Elementary thermodynamics

## 12.2 Environmental Geology

1. Natural hazards, floods, landslides, coastal erosion, earthquakes and volcanic activity and mitigation.
2. Environmental impact of urbanization,
3. Open cast mining
4. Industrial and radioactive waste disposal
5. Use of fertilizers, dumping of mine waste and fly-ash
6. Pollution of ground and surface water
7. Marine pollution
8. Environment protection legislative measures in India
